DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1 and 11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taft et al 4,176,986 in view of Huang et al 6,786,679. Taft shows an elongated vertical offshore oil and gas riser of a given diameter in a body of water including the method, with buoyancy can 21 of the type that includes a vertical axial bore (fig. 5) through which the riser extends coaxially having a radio-axial slot extending through a side of the can but does not show the slot having a width greater than the diameter of the riser. However, Huang shows a buoyancy can 47 for use offshore with oil and gas

having vertical axial bore (fig. 10) through which the cylinder 15 extends coaxially having a radio-axial slot extending through a side of the can with the slot having a width greater than the diameter of the cylinder. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Taft, as taught by Huang, to include a slotted opening to easily attach the buoyancy can to the riser instead of bolted clamshell arrangement of Taft which would require more time to install, thus reducing downtime.

As concerns claim 11, the combination shows the can including at least one buoyant compartment, and wherein the buoyancy of the at least one compartment is adjustable (fig. 2).

As concerns claim 12, the combination shows the can including a plurality of vertical axial bores, each capable of receiving and supporting a riser therein (fig. 1).

Allowable Subject Matter

4. Claims 2-10 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
